

This is ExxonMobil

ExxonMobil is the world's leading publicly traded international petroleum and petrochemical company. We operate globally under the names Exxon, Mobil, Esso, and Imperial Oil. At 4.2 million oil-equivalent barrels a day, ExxonMobil is the world's largest non-government producer of oil and natural gas.

By taking a long-term approach, ExxonMobil is optimally positioned to capture a balanced portfolio of new, high-quality opportunities, including conventional, discovered undeveloped and unconventional resources. Opportunities are prioritized on a global basis and tested to ensure viability across a broad range of future business environments.

ExxonMobil participated in seven major project start-ups in 2007, with 12 more anticipated in 2008. Beyond 2008, an additional 47 major projects are in various stages of project planning and execution. There are about 120 projects in the portfolio, including minor projects.

Global reach is a key competitive advantage of the ExxonMobil natural gas business. We have employees dedicated to sale and market development in almost all major and developing markets. ExxonMobil sells about 11 billion cubic feet per day of natural gas to customers in a variety of sectors including power companies and industrial users. Additionally, we manage more than 1 million barrels per day of natural gas liquids, generate a significant amount of power, and are an important marketer of helium.
